

We customize insulation packages to fit any budget and project.

We customize insulation packages to provide you with the best thermal protection and aesthetics you're looking for - at a cost that fits your budget.

Alcal has been a leading installer of thermal and acoustical insulation products for over 40 years. Our experienced and knowledgeable team of estimators, project managers and installers has the know-how to install a wide variety of insulation products in commercial, residential and industrial projects. Whether it's rigid board, fiberglass, spray foam or other applications, we'll get the job done right.

Batt Insulation

Fiberglass blanket insulation that comes in rolls or sheets is referred to as Batt Insulation. Batts are available in a variety of lengths, widths and R-values.

Blown In/Loose Fill

Loose fill is blown with a machine directly into the attic. Blowing in insulation into the attic is faster than installing batts and offers better coverage by completely covering the attic floor.

Blown In Blanket System (BIBS)

Insulation that is pneumatically installed into wall cavities and cathedral ceilings. It is dense packed with no settling and seals around all outlets, pipes, wires, etc. creating an efficient air barrier.

Spray Polyurethane Foam (SPF)

SPF is environmentally friendly, contains no formaldehyde or ozone depleting chemicals, saves energy and reduces the use of fossil fuels. It also assists in providing good indoor air quality, requires less energy to produce than the leading insulation, and reduces the amount of energy required to transport and install it. SPF is durable, maintains physical properties over time and in a single product (depending on the formula and project) can take the place of three to four other products, including air barriers, sealants, vapor retarders, and weather barriers.

SPF reduces energy use in the following ways:

- Has high R-value per inch (open-cell 3.5 per inch and closed-cell 6.0 per inch)
- Eliminates air infiltration
- Helps control moisture and condensation
- Reduces convective currents in walls and attics
- Eliminates wind washing
- Effective at low and high temperatures
- Provides the correct environment so that the ventilation system performs more efficiently

Air Sealing

Air leakage, or infiltration, occurs when outside air enters a house uncontrollably through cracks and openings. Properly air sealing cracks and openings in your home can significantly reduce heating and cooling costs, improve building durability, and create a healthier indoor environment. Meets the new Energy Star 3.0 requirements for Air Sealing Roof Ceilings.

Good people, making things right.

Customized Insulation Packages

		Energy Efficiency and Value	
		Good	Best
Option 1	Walls: Batt Insulation Ceilings: Batt Insulation or Blown In/Loose Fill		
Option 2	Walls: BIBS Ceilings: Batt Insulation or Blown In/Loose Fill		
Option 3	Walls: Air Sealing + BIBS or Batt Insulation Ceilings: Air Sealing + BIBS or Batt Insulation		
Option 4	Walls: Air Sealing + BIBS or Batt Insulation Ceilings: SPF		
Option 5	Walls: SPF Ceilings: SPF		

How we work makes the difference.

- Most stringent safety program and quality control in the industry
- Well-trained workforce with E-Verified and OSHA-certified employees
- Green building and LEED experience
- Well-capitalized and diversified
- Financial strength and longevity to honor its warranties
- Feels like a family-owned business because it is one

Air Sealing

You can count on us to follow through. That's because Alcal is a family oriented specialty contractor, owned by Pacific Coast Building Products, which was founded by Fred Anderson and has operated successfully for over sixty years.

Doing the job right is personal for us. We are creative problem-solvers with deep technical expertise. We keep in close touch so you know what's going on with the project at all times. We know that you can't make your timeline if we don't make ours. Most of all, we are committed to getting the work done right.

We offer multiple installed products including roofing, waterproofing, insulation, fire stopping, expansion joints, windows, garage doors, fireplaces, and mantels for commercial and residential projects.
